

Gourmet Bites - Implementation Checklist

Backend Implementation (App.py)

- Define menu items (5 categories, 10+ items each)
- Create endpoints: /api/menu, /api/bill, and index route

Frontend Structure (index.html)

- Create layout with category filters, menu grid, and cart sidebar

Styling (p.css)

- Apply premium, modern aesthetic
- Ensure responsiveness and smooth animations

Frontend Logic (app.js)

- Fetch menu data and render
- Handle cart logic (add/remove/update)
- Calculate total and communicate with backend

Verification

- Run Flask server
- Test UI and ordering flow
